WATER SAVING MONITOR

WATER SAVING PRODUCTS - HOW THEY WORK

The **efergy showertime** works by gauging the average output of water from your shower and programming it to a timer with an audio alert. By filling the biodegradable bag provided from your shower head you can calibrate the unit. Once this is done you can set your own water target (we recommend 35 litres or 3 minutes) Once the unit is set, it's ready to use. Each time you have a shower simply press the tick button and the **showertime** will give you a visual display of your usage and give you an audible alert when the target use is reached.

ANIMATED DISPLAY

The **showertime** has a visual animated display which shows drops of water filling to the top of the screen. When the screen is full, the alarm will sound.

VOLUME MODE

The **showertime** volume mode allows you to select your units from litres, gallons or US gallons. You can set your target consumption and set the alarm to sound when it is reached.

TIMER MODE

The **showertime's** timer mode allows you to set your target time in the shower (ie 3 mins) and set the alarm to sound when the time is reached.

efergy®

EASY TO GET STARTED

- Set the time on the 24hour display
- Calibrate the showertime by using the measuring bag
- Select the volume unit from litres, gallons, or US gallons
- Set the target consumption alarm in volume mode
- Set the target time alarm in timer mode
- Use the **showertime** to monitor your personal water usage

TECHNICAL INFORMATION

Model Name	efergy showertime
Screen Display	LCD
Battery Type	Lithium CR2032, 3V
Volume Units	Litres, Gallons, US Gallons
Calibration Bag	Biodegradable

Testing Standards

TBC

RoHS

- 1 x showertime
- 1 x biodegradable calibration bag
- 1 x suction cap
- 1 x lanyard
- 1 x lithium battery
