MONITOR REDUCE SAVE

Eliminates the cost of leaving devices on standby

Use to switch off one media device or a multisolet

Uses your existing media remote to control power

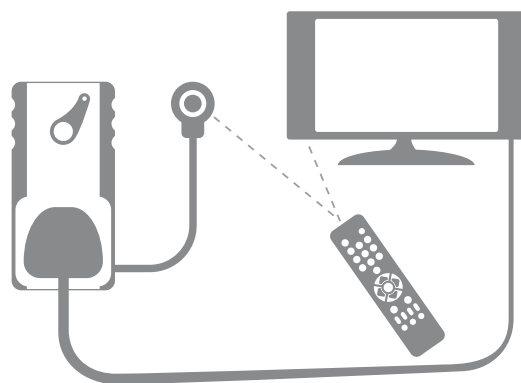

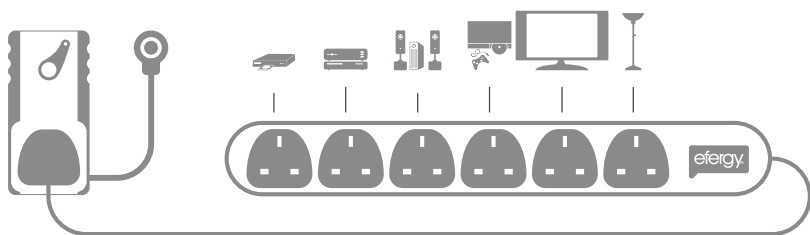

Sit back, relax and control your energy use from afar

# MEDIA STANDBY ELIMINATOR

## ENERGY SAVING ADAPTOR

### ENERGY ADAPTORS - HOW THEY WORK

Our **media standby eliminator** turns off those devices that still draw power when left on standby. Assign a button on your television remote to link with the infra-red eliminator and simply press it to turn the power off from the plug; eliminating standby and saving you money. This product is perfect for turning off entire media entertainment systems plugged into multisockets as many of these devices are left on standby and into powerpoints that are hard to reach.

### MAKING ENERGY SAVING EASIER

The **media standby eliminator** is placed between the television and the wall socket, or a multi-adaptor. The **media standby eliminator** works by sensing when the device has been turned off via the remote control, then after approximately twenty seconds the **media standby eliminator** cuts out power. To set up the user presses the button on the **media standby eliminator** twice and presses the off button on the remote control. The **media standby eliminator** then learns this device.

### EASY TO INSTALL

- Plug the **media standby eliminator** into the mains
- Plug a multisocket into the product
- Plug all of your devices into the multisocket
- Press the on/ off button on your remote for more than 2 seconds
- The LED on the eliminator should flash for 2 seconds
- Your **media standby eliminator** is now connected to your remote

### TECHNICAL INFORMATION

|              |                   |
|--------------|-------------------|
| Model Name   | SBE               |
| Voltage      | 230Vac ~ / 50Hz   |
| Rating       | 7A / 1600W        |
| Max Load     | 2400W             |
